

PRESS RELEASE

01.02.2009

Superior Manufacturing Group, a Grand Rapids, MI, based worldwide technical solutions provider, specializing in custom automation equipment, automated riveting systems and commercial architecture curtain wall components, is pleased to announce the acquisition of the CEI Cleanroom Technologies (CEI Manufacturing) line of turnkey, modular clean room systems. The new division will now operate as **SMG Cleanroom Technologies**.

CEI's successful history in the design, manufacture, installation and certification of turnkey modular cleanroom systems is a natural expansion of Superior's core strengths of specialty manufacturing, program management, machine tool manufacturing processes and installation efficiencies.

This acquisition brings together CEI's extensive aseptic Bio-Pharm and Nano-Tech cleanroom systems experience with Superior's proven manufacturing strengths to provide the customer with the highest quality and value in modular cleanroom systems in the industry.

By bringing a systems approach to cleanroom implementation, **SMG Cleanroom Technologies** will be well-positioned to help customers better manage new clean room installations as well as implementing modifications to current installations by providing complete systems engineering capabilities as well as minimizing time required to install and certify the systems.

Together, the two companies enjoy financial strength, a complete systems offering, an impressive list of blue chip customers and global reach. We look forward to welcoming the CEI workforce into the Superior organization and are confident that the combined enterprise, with its broader range of products, services and capabilities will significantly expand our customer base and opportunities for growth.
